

(a) Main protocol — bilingual sentiment stratified 5-fold CV × 5 seeds (160 sentences)

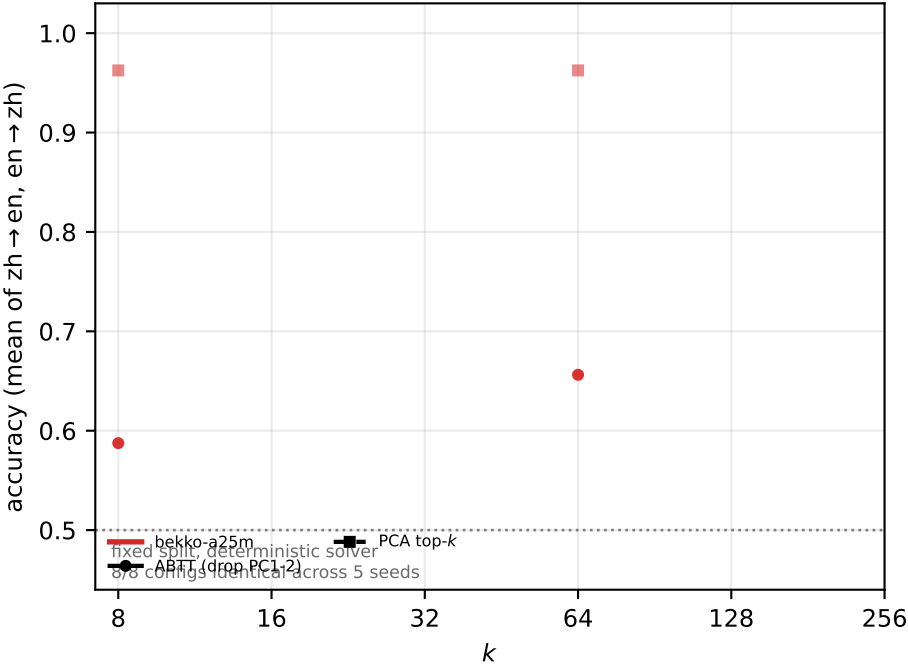

(b) Is ABTT necessary at low k ? (above 0 = ABTT better)

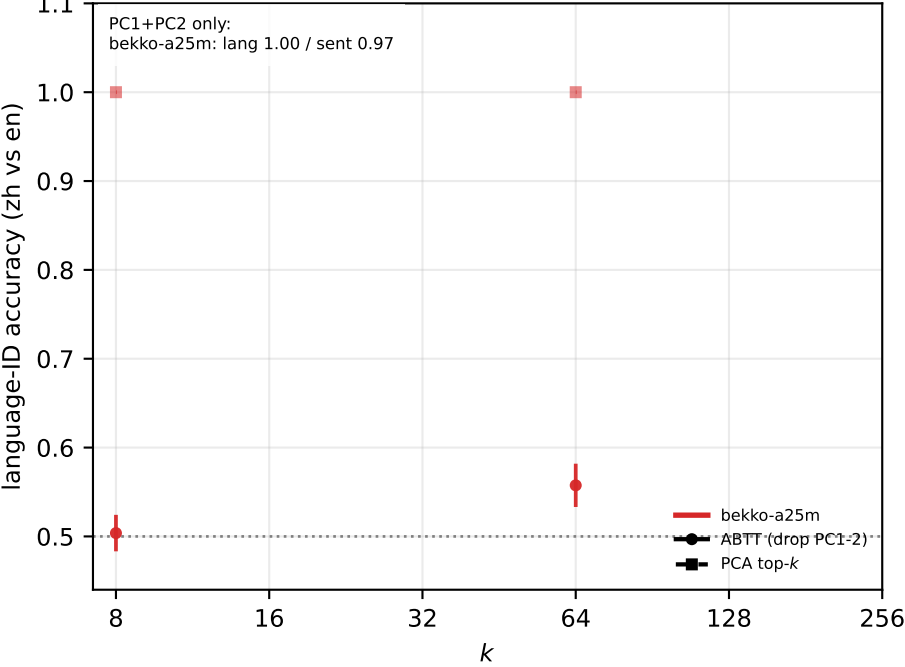

(c) Control arms — standardised PCA vs plain truncation (Matryoshka-style)

(d) Cross-lingual transfer — the regime where F10 reports ABTT to be decisive

(e) What PC1+PC2 actually encode (language ID vs sentiment, 2-D probe)

(f) bekko-a25m — Matryoshka vs PCA (PCA path capped at $n_{tr} - 1 = 127$ dims)
